**Lingsoft®**

# Today's agenda

Introduction

Lingsoft's solutions

Speech recognition and its uses

Human-in-the loop use case: Live subtitling

Time for questions

# Lingsoft in a nutshell

**The largest privately owned Finnish language management company**

Founded in 1986

More than 100 employees

More than 500 partners

**The only Finnish company among the 100 largest language management companies in the world**

Over 1000 end customers

Our language technology solutions have tens of millions of end users

**Language services:** translations, subtitling, transcription, medical transcription, term management, content production

**Language solutions:** accessibility and clarity, findability and text analysis, semantic compatibility

# Lingsoft Core Technologies

## **Text Analysis**

- Hybrid rule-based/deep learning-based

- Lemmatization, disambiguation, named entity recognition, semantic enrichment

- Spelling and grammar checker

## **Automatic Speech Recognition (ASR)**

- Based on deep learning

- Language and domain customization

- Pre- and postprocessing

## **Neural Machine Translation (NMT)**

- Based on deep learning

- Language and domain customization

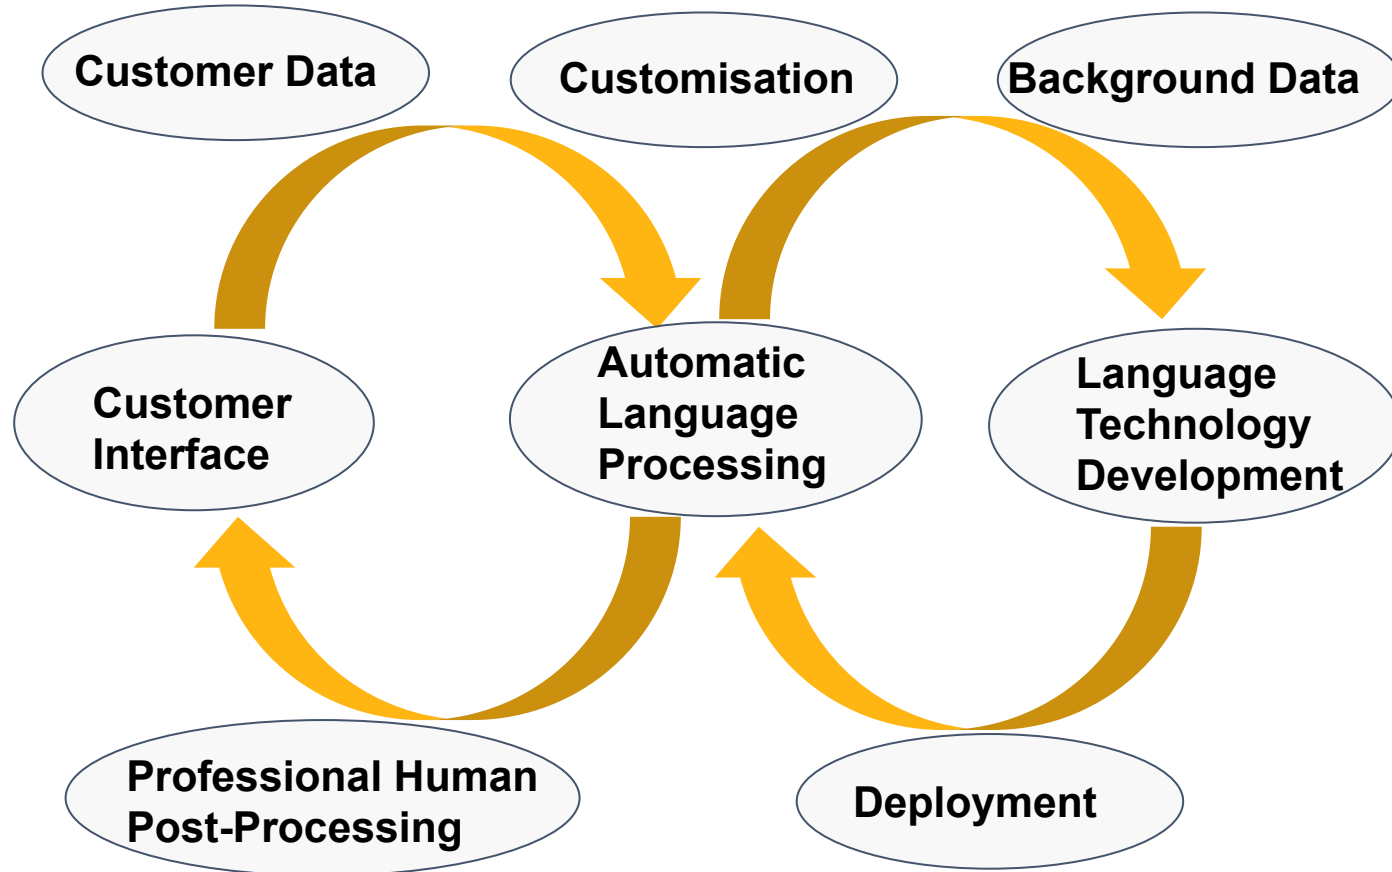

- Pre- and postprocessing

## **Process Automation and Integration**

- Tools available primarily as cloud services

- APIs based on industry standards

# Lingsoft Process Design Model

A solid orange vertical bar is positioned on the far left side of the slide, extending from the top to the bottom.

Other Lingsoft solutions

# Lingsoft Text Analysis

- **Morphological analysis:** fundamentals for the rest, e.g. lemma (dictionary form) identification and disambiguation
- **Proofing tools:** spelling and grammar checking
- **Terminology mark-up:** detect and mark-up terminology in running text
- **Named Entity Recognition:** detect names and related entities in text, important for e.g. **anonymization**, **keywords** and **metadata**
- An important part of speech recognition post processing

# Proofing Tools

Pyyhkäisyelektronimikroskoopillaankohan

Pyyhkäisyelektronimikroskoopillaankohan

Pyyhkäisyelektronimikroskoopillaankohan

Tuntematon sana

Sana Pyyhkäisyelektronimikroskoopillaankohan on korjausluvulle tuntematon. Tarkista, että sana on kirjoitettu oikein.

✓ Pyyhkäisyelektronimikroskoopillaankohan

✓ Pyyhkäisyelektronimikroskoopeillaankohan

maybe with their scanning electron microscope

## Supported languages:

- Finnish (incl. general and medical domain)
- Swedish (incl. standard and Finland Swedish)
- Norwegian (bokmål and nynorsk)
- Some support also for a number of other languages, e.g. English, Russian, German, Northern Sami, ...

# Terminology and Keywords

Valtiontalouden tarkastusvirasto valvoi vuoden 2022 aluevaaleissa ehdokkaan vaalirahoituksen ja vaalikampanjakulujen ilmoitusvelvollisuuden noudattamista laissa säädetyllä tavalla. Kaikki ilmoitusvelvolliset jättivät vaalirahoitusilmoituksen.

ilmoitusvelvollinen (vtv)

sv: redovisningsskyldig

en: discloser

Given a termbase or ontology, then terms/concepts can be identified and marked-up in running text

# Lingsoft Machine Translation

Automatically generates translations for text

Based on **open source neural machine translation**  
(NMT) tools (same as behind Microsoft Translator)

Trained with **tens of millions of segments** from internal  
and public data sets (e.g. DGT TM)

Used by **hundreds of translators** via MTLab - our plugin  
for Trados Studio

Translates about **two million words every month** for  
Lingsoft post-editing jobs

# Terminology Control in NMT

Henkilötunnus = Social security number? Personal identification number? Personal identity code? ...?

source + term list + NMT engine = machine translation with the right terminology

Source	termNMT
<p>&lt;SRCTERM&gt; henkilötunnuksen &lt;TRANS&gt; personal identity code &lt;/TRANS&gt; saaminen edellyttää henkilökohtaista käyntiä &lt;SRCTERM&gt; palvelupaikassamme &lt;TRANS&gt; service location &lt;/TRANS&gt; .</p>	<p>Obtaining a personal identity code requires a personal visit to our service location.</p>

Lingsoft speech solutions

# Lingsoft Speech Service

Our platform for serving speech recognition clients

Speech-to-text or automatic speech recognition (ASR)

Automatically transcribes speech

Based on **open source** tools

Trained with a few **thousands of hours of** transcribed  
**speech plus hundreds of millions of sentences**

Near **real-time** transcription and live subtitling

Used by **Yle, The Finnish Institute for Health and  
Welfare** and **the Finnish Parliament** (Eduskunta)

Tailored post-processing capabilities available

# Features

Supports file-based / real-time streams / voice commands

Industry standard APIs and two UIs

- Transcription, subtitling, speaker segmentation

- Helper APIs for data I/O, statistics

Speaker-independent, requires no individual speaker training process

General language models, as well as customer/domain-specific language models development

- Supported languages

  - Finnish: general, medical, politics

  - Swedish: general

  - English: general (pilot use)

Secure cloud connections (based in Finland), on-premise possible

# Domain and Customer Adaptation

## **Problem**

Words that were not seen in training are poorly recognised

## **Solution 1**

Adapt the model a bit more with text from the customer.  
The more text with the right content, the better the result.  
Works well for applications where the customer has a lot of pre-existing text with correct terminology, e.g. pathology.

## **Solution 2**

Collect sentences with words that are poorly recognised that you believe might be useful in the future, e.g. names of (in)famous people. Then: re-train.

embedded to  
broadcast

Live subtitled TV  
or internet  
broadcast

Hyvää huomenta ja tervetuloa  
Aalto-yliopiston puheen käsittelyn kurssille  
9.10.2023!

Good morning and welcome to the  
Speech Processing course of Aalto  
University on October 9, 2023!

# From speech to subtitles - live

Speech to text

Post-processing

Voice commands

Hyvää huomenta ja tervetuloa  
**aaltoyliopiston** puheen  
käsittelyn kurssille **yhdeksäs**  
**kymmenettä**  
**kaksituhattakaksikymmentä**  
**kolme** huutomerkki

Hyvää huomenta  
ja tervetuloa  
**Aalto-yliopiston** puheen  
käsittelyn kurssille  
**9.10.2023** huutomerkki

Hyvää huomenta ja  
tervetuloa  
Aalto-yliopiston puheen  
käsittelyn kurssille  
9.10.2023!

Speech models

Text analysis and  
tailored rules

Voice commands to edit  
text

Speech to text

Post-processing

Voice commands

Large amounts of speech and  
even larger amounts of text  
needed for training the  
models

[aaltoyliopisto] >  
Aalto-yliopisto  
[yhdeksäs kymmenettä  
kaksituhattakaksikymmentä  
kolme] > 9.10.2023

"Repla miksi kysymysmerkki"  
-Miksi?

# The goal: quickly readable text

*"Äsdeepee **kaksikymmentäneljä pilkku viisi** lisäystä **yksi pilkku yksi**."*

→ **SDP 24,5** lisäystä **1,1**.

*"**Vuonna seitsemänkymmentäkuusi** koneisto alkoi yskiä."*

→ Vuonna **1976** koneisto alkoi yskiä.

*"**Hoohetki oli kello seitsemän kolmekymmentä**."*

→ **H-hetki** oli **kello 7.30**.

Examples of  
acronym, number  
and unit shrinking

**But preferred format depends on the use case**

## Subtitling

**1500 kilometrin** laajuudessa  
Rheassa näkyy muinainen pinta.

**OR?**

**1 500 km:n** laajuudessa  
Rheassa näkyy muinainen pinta

## Medical transcription

**RR 145/84 mmHg**

**OR?**

**Verenpaine 145/84**  
**elohopeamillimetriä**

# Even more helpful tools for video files

Legibility can be automatically improved when not working in a live broadcast:

Automated recognition for **sentence borders** and **speaker changes**

Automatic recognition of **subclauses** as cut points for **splitting longer sentences**

Automatic recognition for **multi-word terms and collocations** that should not be split: the White House, president Niinistö

Automatic punctuation

# Adaptable and developing system

Regularly trained for customer use with relevant and quality material

- Vocabulary changes over time

Models can be adapted for each organization if required

- Customers can add material to the system and adapt their own model

Customer can add individual words

- pronunciation guidelines

- examples of sentence context

- Proper noun or not?

Human in the loop - also in training

Future of live accessibility solutions?

# Live subtitling on all platforms

# Multilingual subtitling

Hyvää iltaa!

# Multilingual speech to speech

Thank you!
